## Projects

**TaskMaster**　08/2024
A to-do list application that helps users manage tasks efficiently, with features like adding, editing, deleting tasks, and marking them as completed.

**Space Vision**　08/2024
A React-based NASA application that fetches and displays data from NASA's public APIs, including astronomical pictures, rover images, and mission information.

**Craftshub**　11/2024
An artisan locator system that helps users find artisans based on location, allowing easy access to skilled workers for various services.

**Kaizen Fit**                                                           04/2021

A fitness application that tracks workouts and progress, providing users with personalized fitness plans and performance analytics.

**GreenBot**                                                             11/2024

An intelligent virtual assistant designed to engage users in natural conversations, answer questions, and provide support across various topics and tasks.

**Bites**                                                                04/2025

A sleek, conversion-focused landing page for a food delivery service, featuring responsive design, appetizing food visuals, and optimized call-to-action elements to drive user engagement.

**Royalspoon Food and Events**                                           04/2025

A full-stack catering platform with Paystack payment integration, React-Email order confirmations, and responsive UI—built for seamless customer purchases.

**Freescribe**                                                           05/2025

A browser-based transcription and translation tool powered by machine learning. Built with React, it supports multiple languages and offers a responsive, distraction-free UI for seamless content conversion.

**KaizPay**                                                              05/2025

A browser-based transcription and translation tool powered by machine learning. Built with React, it supports multiple languages and offers a responsive, distraction-free UI for seamless content conversion.

**SaaS Landing Page**                                                    06/2025

A clean, modern, and conversion-optimized SaaS landing page template designed to showcase software products or startups. Built with React and Tailwind CSS, it features sleek user interface, responsive design, feature highlights, customer testimonials, and a clear call to action to drive sign-ups or conversions.

**Findcribs**                                                            08/2025

A modern, user-friendly real estate discovery platform designed to connect property seekers with available listings. Built with React and a scalable backend, it features location-based property search, detailed listings, responsive design, and an intuitive interface to improve property visibility and simplify the search process.
